

Industry 4.0 – networked thinking

Modern IT systems for production

Are you ready for the demands of Industry 4.0? Do you want to successfully optimise the production environments of modern, internationally established manufacturing companies? And work in our team of highly qualified informaticians and electrical engineers to develop innovative software solutions? Then we are looking for you:

our

BI Backend Developer (m/f/d),

who is not afraid of challenges and derives satisfaction from the job.

What you will be doing

- › Developing and supervising the ETL processes
- › Operatively supporting the central reporting platform (Data Warehouse)
- › Cube configuration
- › Ensuring quality-assured and timely data provision
- › Supporting the analysis of specific questions from the respective departments
- › Coordinating and implementing new processes for data provision with the departments involved (raw data / data sources, UI)

- › Know-how in the field of Data Analysis Expressions (DAX)
- › Other programming skills preferable, e.g. Java, C# or ASP.Net
- › Experience with ETL tools
- › You don't have to ask who or what is Kimball?
- › Knowledge of the production environment: Key figures and KPIs
- › Good knowledge of MS Office and experience with other Microsoft products, e.g. Visio and Excel
- › Excellent conceptual and analytical skills
- › Quick grasp of complex matters
- › Highly analytical and results-oriented way of working, an affinity to numbers and "business sense"
- › Ability to work independently and in a team, confidence and assertiveness
- › Excellent English and German skills, both written and spoken

What makes you qualified

- › Completed studies in (business) information technology or comparable studies, industrial engineering, business administration or comparable studies
- › Experience in the Business Intelligence/DWH environment and in the design of multidimensional databases (especially based on MS SQL) is preferable
- › You already have extensive professional experience in this environment
- › Familiarity with SQL (preferably MS SQL)
- › Knowledge of SSIS (MS SQL Server Integration Services), SSAS (MS SQL Server Analysis Service)

What we are offering you

- › A devoted team in a friendly working environment
- › Extensive support during the initial training period
- › The opportunity to develop yourself personally and assume responsibility
- › A balanced mixture of tradition and modernity
- › Appreciative, respectful and open communication
- › Demanding customers at international level
- › Sustainably growing company structure
